Career Objective

AI & Data Science student with expertise in Generative AI, Prompt Engineering, LLMs, and AI-powered automation. Passionate about building AI applications and exploring AI tools to improve automation. Looking forward to leveraging AI automation in real-world applications and contributing to cutting-edge AI research.

Education

B.Tech in AI & Data Science , Excel Engineering College (2022-2026)	CGPA: 9.5
HSC , Kongu Vellalar Matric Hr Sec School (2021-2022)	89%
SSLC , Kongu Vellalar Matric Hr Sec School (2019-2020)	70%

Skills

Programming: Python, Java, R, Kotlin, SQL, C
Generative AI & LLMs: LangChain, OpenAI AI, Gemini AI, Meta AI, Claude AI, Hugging Face
AI/ML Frameworks: TensorFlow, PyTorch, OpenCV, YOLO, Scikit-Learn
AI Automation: AutoGPT, AI Agents
Other: Web Development, API Integration, UI/UX design

Internships

Pantech Solutions – AI & Machine Learning Internship - Worked on AI model training, computer vision, and NLP projects.
Technologies Used: Python, TensorFlow, OpenCV, NLP techniques
Outcome: Developed an ML model for predictive analytics.
UCS Private Limited – Web Development Internship - Designed dynamic websites using front-end and back-end frameworks.
Technologies Used: HTML, CSS, JavaScript, Flask, MySQL
Outcome: Built an interactive dashboard for user data management.
Ethernet Private Limited – Data Science Internship - Focused on Python-based data science techniques. -
Technologies Used: Pandas, NumPy, Matplotlib, Scikit-Learn
Outcome: Built data-driven models for business insights.

Projects

AI-Powered Traffic Monitoring System
Technologies Used: OpenCV, YOLO, Python, TensorFlow, Deep Learning
Outcome: Automated security by detecting faces, covered features, and anomalies in real-time traffic scenarios.
MindScribe: Thought-to-Text Simulation App
Technologies Used: Next.js, Node.js, Supabase, TensorFlow, OpenCV, EEG Image Processing
Outcome: Converted EEG brainwave signals into meaningful text.
Auction AI – AI-Powered Bidding System
Technologies Used: Python, Flask, MySQL/MongoDB, Google Maps API
Outcome: Implemented a real-time bidding platform with multi-language support and AI analytics.
Generative AI Image Synthesis
Technologies Used: GANs, TensorFlow, HuggingFaceDiffusionModels
Outcome: Developed an AI- powered image generator for digital artwork.
HopIn-An Event-based and Intra-Campus Transportation System
Technologies Used: Next.js, Tailwind CSS, Node.js, Supabase, Mapbox API, OpenAI GPT
Outcome: Enabled smart ride coordination and AI-based cost splitting, reducing transport delays by 40% and improving user satisfaction to 98%.

Certifications

Google: Generative AI Essentials
IBM: Machine Learning Specialization
Coursera: Prompt Engineering
GUVI: Generative AI & AI App Development

Leadership & AI community

Technical Team Lead: AI Hive (Managing Development Projects)
Aspiring Developer: NVIDIA Developer Team (Focusing on AI&ML Innovation)
